Code:

```
1 class Solution(object):
2     def plusOne(self, digits):
3         """
4         :type digits: List[int]
5         :rtype: List[int]
6         """
7         n=0
8         for i in digits:
9             n=n*10+int(i)
10        n+=1
11
12        result=[]
13        for digit in str(n):
14            result.append(int(digit))
15        return result
```
